

COMMAND+AIM OFFER

WHAT IS COMMAND?

COMMAND 360ME herbicide is a group 13, soil applied, pre-emergent residual herbicide that provides early control of cleavers in front of canola. It alleviates initial flushes of cleavers allowing your in-crop herbicide to control secondary flushes, that will be much smaller, resulting in overall improved control of cleavers.

WHAT IS AIM?

AIM EC herbicide is a group 14, PPO inhibitor that controls a wide range of troublesome weeds, including many glyphosate-resistant biotypes. Adding AIM to glyphosate will increase burn down for pre-seed weed control. AIM targets a wide spectrum of broadleaf

weeds prior to seeding a variety of crops including, canola, pulses and cereals.

OFFER

Buy a **MINIMUM of 160 ACRES COMMAND** and

Receive \$0.50/acre rebate

on matching acres of **AIM** from **Nov 30th 2016 and Jun 30th 2017**
