YOUR FIRST LINE OF DEFENSE AGAINST CLEAVERS IN CANOLA

WHAT IS COMMAND?

Command® 360ME is a group 13, soil applied, pre-emergent residual herbicide that provides early control of cleavers in front of your canola. It does not require any incorporation and is taken up by the roots of germinating cleavers.

WHY USE COMMAND?

New mode of action for resistance management

Command is the only registered group 13 herbicide. Bringing in a new mode of action to attack cleavers helps manage resistance concerns.

Works well with all herbicide tolerant canola systems

Command alleviates the initial flushes of cleavers. This will take the pressure off the in-crop herbicide and allow them to control any secondary flushes that will be much smaller, resulting in overall improved control of cleavers.

Don’t change your program

Command is an easy to use liquid formulation. Tank mix it with your glyphosate burn-off application, eliminating an extra pass.

WHAT RATE SHOULD I USE?

Command should be applied at a rate of 0.33 L/Ha (0.135 L/ac) or 40 acres per jug.

Command Shows Consistent Control of Cleavers

- 120 g ai = 40 acres per jug rate
- > 80% control, 89% of the time

FMC Research Small Plots 2012/13 (8 sites) ratings prior to in-crop apps (25-37 DAA)

OTHER INFORMATION

Water Volume: 10 US gal/ac (100 L/Ha)

Package Size: 2 x 5.4 L jugs per case

Activation Requirements: Requires 5-10 mm of rain for activation
