

Boost weed control, improve resistance management and save money.

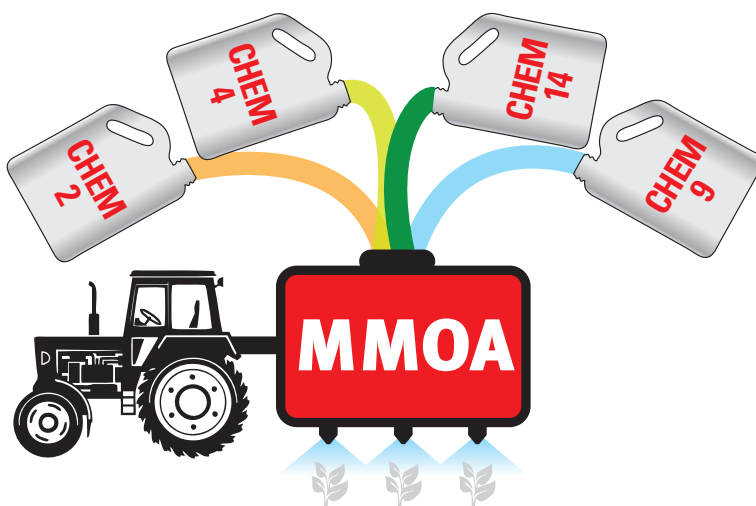

Glyphosate alone isn't good enough for your pre-seed weed control program. That's because glyphosate's single mode of action can only do so much against certain hard-to-kill broadleaf weeds, including:

- Kochia (including Group 2, 4 & 9 resistant biotypes)
- Wild buckwheat
- Dandelion

...and it can't control volunteer Roundup Ready® canola at all. You need multiple modes of powerful action in your pre-seed burnoff and FMC has you covered.

Aim® EC herbicide + Express® FX herbicide + glyphosate: the right combination for spring

- Four modes of action working together on weed control = significantly cleaner cereal fields.
- The ultimate proactive resistance management.

Ask your retailer how you can save an additional \$0.50/acre when you purchase Aim® EC herbicide and Express® FX herbicide together.

GROUPS
14 | 2 | 4 | 9*

Multiple groups for the ultimate resistance management plan.

Weeds Controlled:

- Cleavers
- Dandelions
- Flixweed
- Lamb's-quarters
- Narrow-leaved hawk's-beard
- Volunteer canola
- Wild buckwheat
- ...and more

*When Aim® EC herbicide, Express® FX herbicide and glyphosate are tank-mixed.

Always read and follow label directions.
